

Story About Getting My Period

I am growing up.

My body is changing.

I will start my period soon.

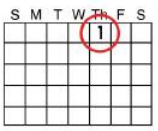

I am not able to start or stop my period. My body is in control. This can be frustrating.

Sometimes it may surprise me.

It will happen one time a month for many years.

It may last 4 to 7 days each time I have it.

My mom can help me keep track of my menstrual cycle.

When I get my period I will see blood in my underpants.

When this happens I will need a hygiene product like a sanitary pad, tampon, or period panties.

Using a hygiene product will stop the blood from getting on my clothes.

Menstruation is private.

I can ask my mom questions about menstruation. she can help me decide which hygiene product is best for me to use.

My mom can help me choose a safe person at school or work to help me if I have my period.

During my period I may notice other changes in my body.

I may notice breast tenderness or stomach pain.

I can still do most of my usual activities when I have my period.
